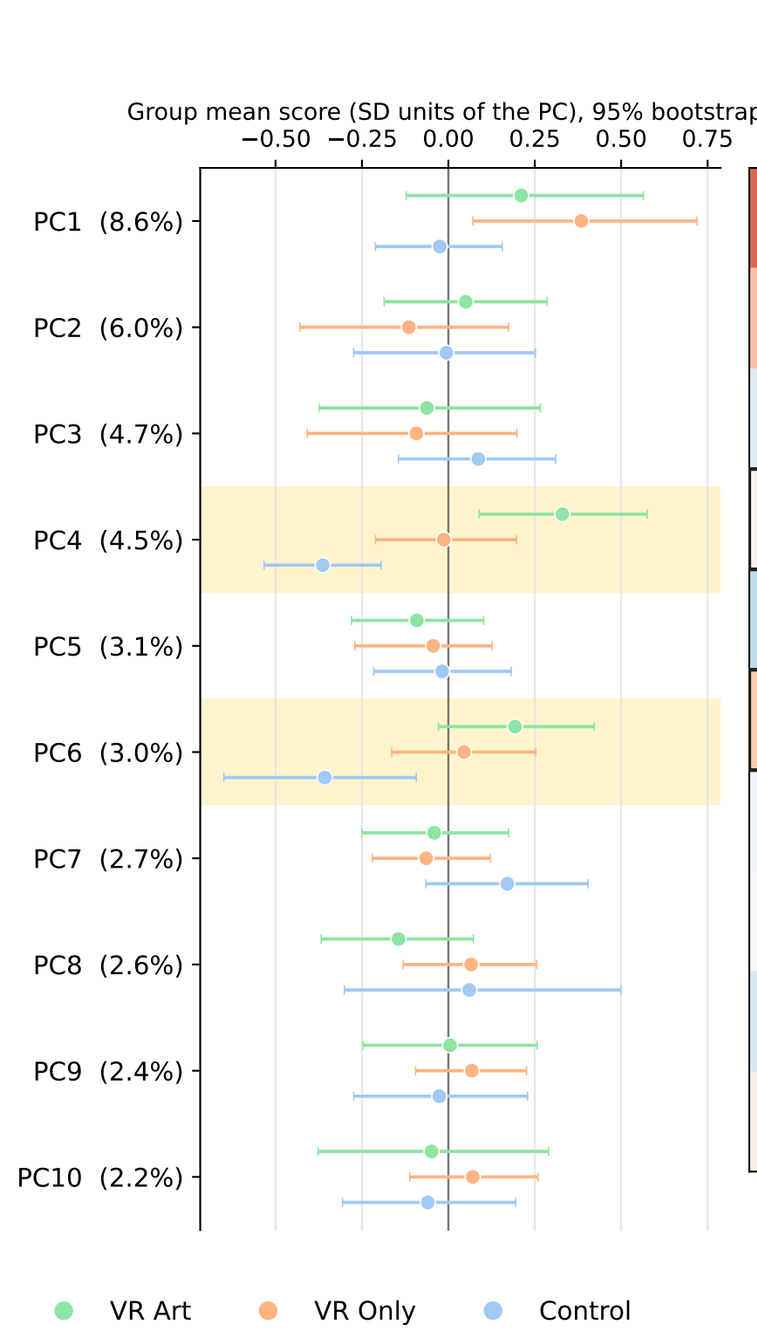
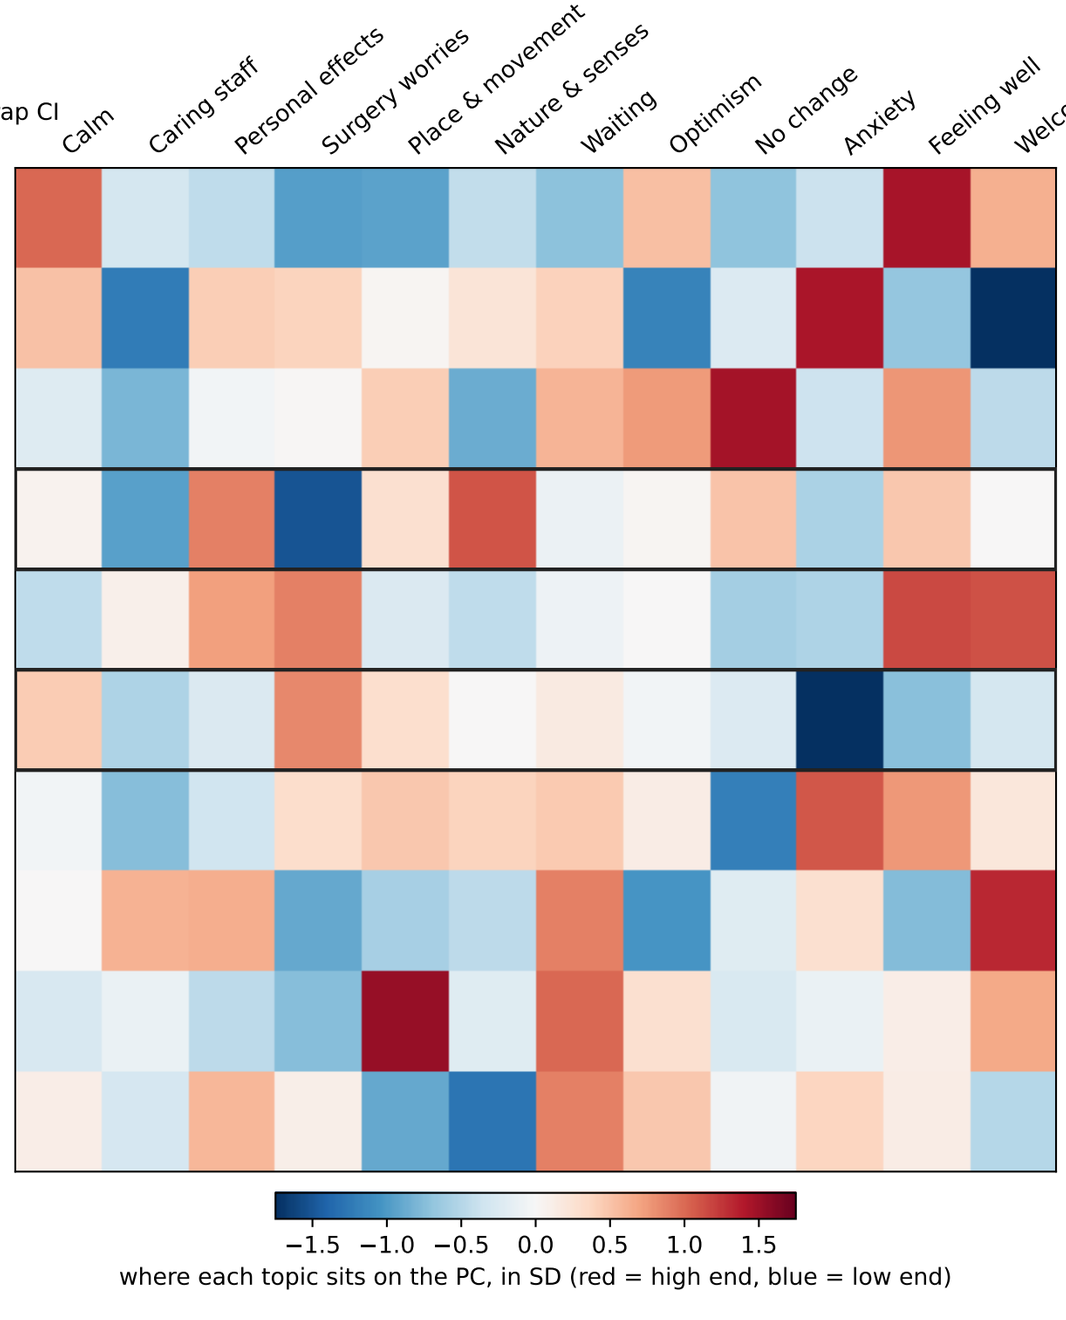
Which principal components separate the conditions, and what do they point toward?
yellow/outlined rows: omnibus permutation test significant after Benjamini-Hochberg over the first 10 PCs; PC signs are arbitrary





F = 1.7 eta² = 0.07 p(FDR) = 0.634
high: Feeling well, Calm | low: Surgery worries, Place & movement

F = 0.4 eta² = 0.01 p(FDR) = 0.877
high: Anxiety, Calm | low: Welcomed, Caring staff

F = 0.4 eta² = 0.02 p(FDR) = 0.877
high: No change, Feeling well | low: Nature & senses, Caring staff

F = 10.0 eta² = 0.29 p(FDR) = 0.003*
high: Nature & senses, Personal effects | low: Surgery worries, Caring staff

F = 0.1 eta² = 0.01 p(FDR) = 0.877
high: Feeling well, Welcomed | low: No change, Anxiety

F = 5.2 eta² = 0.18 p(FDR) = 0.044*
high: Surgery worries, Calm | low: Anxiety, Feeling well

F = 1.4 eta² = 0.05 p(FDR) = 0.634
high: Anxiety, Feeling well | low: No change, Caring staff

F = 0.7 eta² = 0.03 p(FDR) = 0.877
high: Welcomed, Waiting | low: Optimism, Surgery worries

F = 0.2 eta² = 0.01 p(FDR) = 0.877
high: Place & movement, Waiting | low: Surgery worries, Personal effects

F = 0.3 eta² = 0.01 p(FDR) = 0.877
high: Waiting, Personal effects | low: Nature & senses, Place & movement
